

## WATERBUS 1100

This catamaran is favoured by municipalities, which it helped to make their region more attractive to tourists. The size of this boat gives the passengers freedom of movement during the cruise, and the comfort is increased by the aft terrace. There is a bathroom with a marine toilet, a possibility to build in a small galley, and comfortable upholstered sofas with their own tables. There are more sitting places that the permissible number of passengers, which also increases the passengers' comfort. Based on this model you can build a comfortable houseboat with one bedroom. Thanks to its small mass and small draught the boat uses from 4 to 6 litres of fuel per hour. You can order this model with the upper terrace at any stage of its development.

### Technical data:

Total length with engine:	11,35 m
Total length of the hull:	10,70 m
